### **EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

Regarding independent claims 1 and 11, the prior art of record does not disclose or reasonably suggest the specifics of a postfilter of linear predictive coefficients transformed from the frequency domain into the time domain, where gains are calculated by an all-pole model including both magnitude and phase.

Regarding independent claim 14, the prior art of record does not disclose or reasonably suggest the specifics of computing a tilt of a linear predictive coefficients spectrum and compensating using the computed tilt, where a postfilter is generated by a non-linear transformation of compensated linear predictive coefficients in the frequency domain and anti-aliasing is executed in the time domain.

Regarding independent claims 18 and 23, the prior art of record does not disclose or reasonably suggest the specifics of a linear predictive coefficients tilt computation model for computing the tilt of the linear predictive coefficients and compensating the linear predictive coefficients according to the computed tilt, where a formant filter calculates the frequency domain formant filter gains including both a magnitude and phase response.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
